Engaging in herpetological research at a primarily undergraduate institution

I am an evolutionary ecologist who is interested in how ecological processes and sexual selection lead to the evolution of complex phenotypic traits, and I examine these topics primarily in amphibians and reptiles. I work at a primarily undergraduate state university, Lock Haven University, so much of my research is driven by student interest and locally abundant species. I love engaging in research with undergraduates and helping them to develop their early skills in scientific curiosity and discovery.

Dr. Jennifer Deitloff
Lock Haven University
