

Biology Seminar Series

Biology Graduate Student Association & Department of Biological Sciences

Ecological and evolutionary dynamics of poleward shifts in geographic ranges

Dr. Eric Sanford

University of California Davis &
Bodega Marine Laboratory

Dr. Sanford's research integrates ecology, evolution, and biogeography to understand the processes that shape marine communities over large spatial scales and in an era of accelerating global change. Much of his work focuses on marine communities along the coasts of California and Oregon and combines field and laboratory experiments, genomic and physiological approaches, and oceanography.

You can learn more about his research and lab group here: <https://www.sanford-lab.com/>

Friday, **September 18th**, 12 PM (PST)

Via zoom, meeting ID: 914 9596 1391

Meeting password: BGSAtalks
